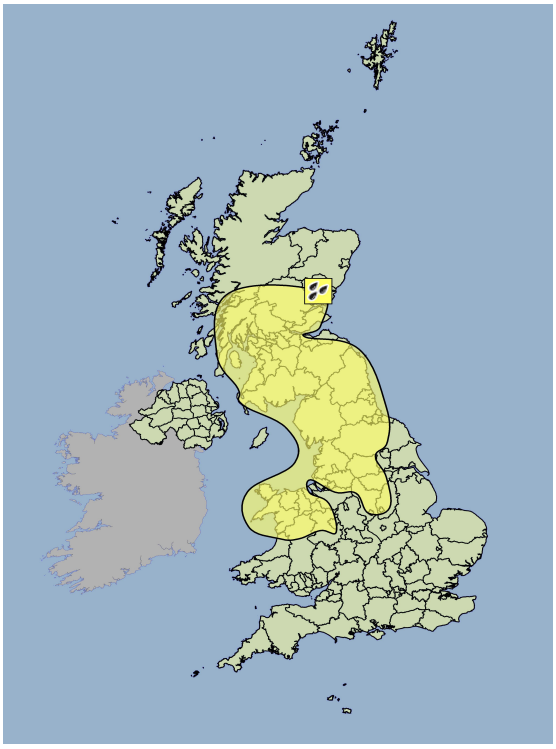
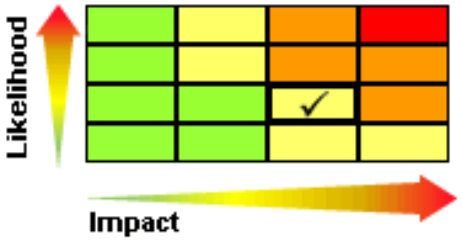
National Severe Weather Warning Service





Chief Forecasters Assessment
A strong, moist westerly to southwesterly flow is expected to develop during Saturday and last through most of Sunday before clearing during the evening. This flow is expected to bring a period of heavy and persistent rain, with 50 to 100 mm of rain falling in many areas of western and northern England and north Wales, whilst 40 to 60 mm is expected across parts of southern Scotland. Higher totals are expected across hills; these areas are covered by a separate Amber warning. This rainfall, falling on to already saturated ground, is likely to lead to further flooding.

There is some uncertainty in the exact locations of heaviest rainfall, as well as peak amounts; this will depend on how far north the frontal system moves and how long it remains aligned across any one area. For this reason, the warning will be kept under review over the weekend.

The Met Office have issued a **Yellow Warning** of **Rain**

Valid from **15:00 on Sat, 14th Nov 2015** until **22:00 on Sun, 15th Nov 2015**

A frontal system is expected to become slow moving across parts of northwest Wales, northern England, the far north of the Midlands and much of south and west Scotland. Rain associated with this feature is expected to become heavy and persistent, especially over hills exposed to the strong westerly to southwesterly flow.

Be aware that, given already saturated conditions, flooding is possible either from standing water or from rivers which have remained high after the large rainfall totals over the last few days.

This is an update to the warning issued on Friday to include a larger part of northeast England and southern Scotland.
